THIS IS MY CURRENT VERSION.

TOPIC 02: LEARNING HOW TO LEARN AND LEARN FAST?

LEARNING HOW TO LEARN AND LEARN FAST?

Ways to learn and learn quickly for a new language or knowledge:

- Clearly define the learning purpose, asking yourself: "Why am I learning this language/knowledge?".
- Seek information on popular platforms for an overview.
- Practice immediately after acquiring basic knowledge. Practicing helps retain information longer and enhances understanding of how things work.
- When facing challenging issues, seek solutions from various sources, including online platforms, documentation, and discussions with others.
- Focus on the issues that need understanding, avoid distractions, and use highlighting methods to emphasize important content.
- Repeat practices to avoid forgetting information. This repetition helps reinforce knowledge and neural connections in the brain.

THANK YOU
